RESEARCH INTERESTS

My dissertation research *Strategic Information Disclosure in Service Operations: A Theoretical and Experimental Study*, conducted under the supervision of Rouba Ibrahim and Dongyuan Zhan, focuses on applying queueing models, game-theoretic models, and econometric analysis of experimental data to *formulate actionable policy recommendations for service operations*. In particular, I study the way customers and managers in service systems strategically exchange private information to influence each other's beliefs and decisions, and how these strategic interactions affect the system's overall performance.

Methodology: Queueing Theory, Game Theory, Experimental Design, Econometric Analysis of Experimental Data.
